Own the capacity. Keep the margin.

Buy dedicated wholesale voice capacity on an international mobile corridor. Then choose how you use it. Run your own traffic, or appoint Minutes Network to resell your capacity. **Your floor sets the cost of each minute carried. What is realized above it is your margin.**

1 WHAT YOU BUY

You buy dedicated ports on one international mobile corridor. Each port is modeled to carry up to **500 minutes per day** on a practical basis.

Your floor sets your cost for each minute carried over your capacity.

2 WHERE THE MARGIN COMES FROM

In wholesale telecom, scale matters. Minutes Network commits to carriers at volume. That gives access to rates that smaller commitments typically don't get.

RATE REALIZED WHEN MINUTES ARE SOLD

THE DIFFERENCE — YOUR MARGIN

YOUR FLOOR — YOUR COST PER MINUTE

Your floor sets the cost of each minute carried. When traffic is sold above that floor, the difference is your margin.

> **We haven't invented those economics. We've opened up access to them.**

3 TWO WAYS TO USE IT

You self-run it. Have your own traffic? Send it over your ports. Your floor sets the cost of every minute carried. What you realize above it is your margin.

We resell it. Appoint Minutes Network to resell your capacity using our wholesale traffic. You don't need your own customers or telecom infrastructure.

4 HOW TRAFFIC AND SETTLEMENT WORK

- Your accrued margin is visible in your portal as minutes are carried.
- Settlement timing depends on the traffic agreement. Amounts become withdrawable once the buying carrier settles.
- You can then withdraw by bank wire or USDC, subject to the applicable minimum and processing terms.

5 EXAMPLE CORRIDOR - MEXICO

PURCHASE	PORTS	PRACTICAL CAPACITY / DAY	YOUR FLOOR	OBSERVED MARKET REFERENCE
$1,094	10	5,000 min	**$0.00729**	$0.00746/min
$5,460	50	25,000 min	**$0.00728**	$0.00746/min
$61,020	150	75,000 min	**$0.00678**	$0.00746/min
$203,100	500	250,000 min	**$0.00677**	$0.00746/min

Volume can unlock a lower floor. The difference between your floor and the rate realized when minutes are sold determines the margin on carried traffic.
Observed wholesale rates are market data, not a promise of utilization, resale rate, margin or future performance.

6 FIVE CORRIDORS AVAILABLE

Mexico	Calling code +52	From **$1,094**
Colombia	Calling code +57	From **$1,850**
Pakistan	Calling code +92	From **$2,310**
Jamaica	Calling code +1876	From **$3,528**
Albania	Calling code +355	From **$5,425**

7 GETTING STARTED

- Capacity is typically activated within 2-3 business days. Traffic ramps up after that.
- Your Accelerator portal shows your ports, carried minutes, realized rates and balances.
- You set your minimum resale rate. You can pause or resume traffic at any time.
- ID and anti-money-laundering checks apply to every purchase.
- Every purchase is documented by a purchase agreement and invoice.

BUILT ON MINUTES NETWORK

Accelerator traffic runs over Minutes Network. More carried volume means more network activity and network fees, with traffic visible through the public explorer. Accelerator does not bypass the network's DePIN economics.

Stated plainly. Accelerator is a telecommunications capacity purchase. Observed wholesale rates are market data and do not represent guaranteed utilization, resale performance, margin or return. Traffic runs over the Minutes Network DePIN, applicable network fees are paid as normal, and activity is visible through the public explorer. Full and binding terms are set out in the purchase agreement.
